enabling seamless efficiency across all scenarios.

## AI Software

Embedded AI software supports smart Q&A, AI image generation, real-time translation, and more, enhancing productivity and user experience.

## Customizable Interface

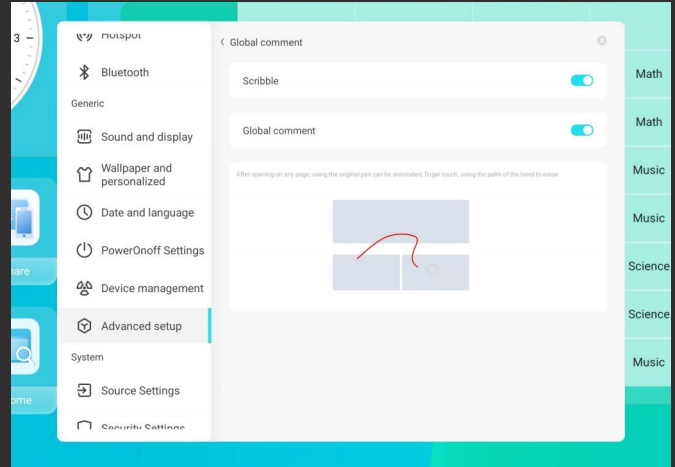

This feature enables users to customize the interface layout, background, and tool positions based on personal preferences, enhancing efficiency and creating a personalized workspace.

## Global Annotation

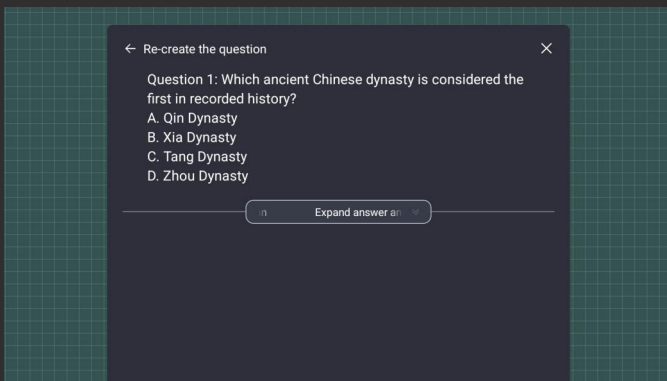

The pen is for writing, and the finger is for touch. You can annotate and control the large screen at any time without switching (except in the whiteboard software).

## Scribble

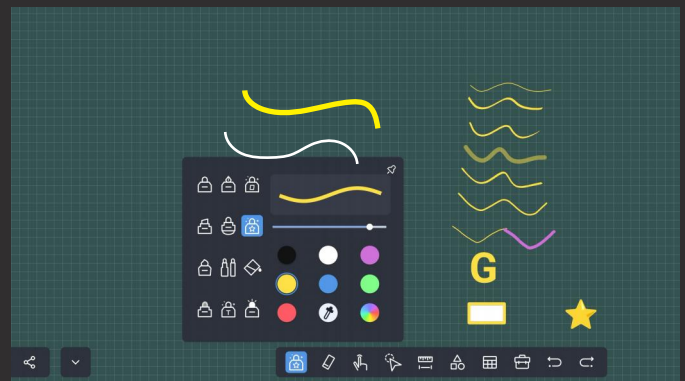

In the browser search bar, the text written by the stylus in the blank area can be recognized and typed into the search bar.

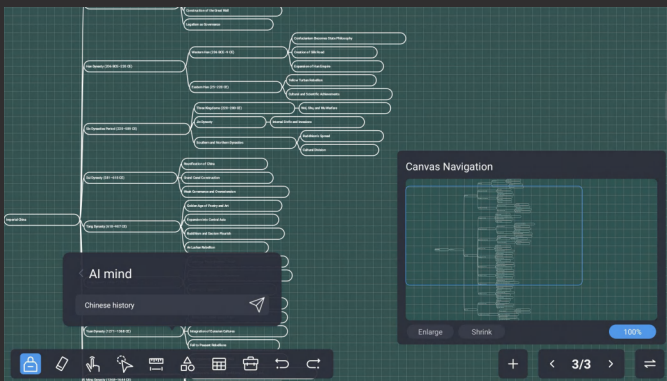

## Whiteboard
